How Bnchmrk Works

From filtering to reporting, a quick overview of the platform in action

Your Benchmarking Process, Simplified

Bnchmrk turns raw plan data into polished benchmarking reports—in minutes, not days. Whether you're an HR team managing benefits or a consultant serving multiple clients, the process is fast, accurate, and built around you.

Step 1: Upload Your Plan

Start by entering your current benefits. Our guided input covers:

- Medical, dental, vision, life, disability, and stop loss
- Plan designs, premiums, and employee contributions
- Fast entry with pre-filled templates or API upload options
- Built-in validation for clean, comparable data

Step 2: Filter Your Benchmark

Create a custom peer group using filters like:

- Industry
- Company size
- Location
- Plan type and funding model

You can combine over 5,000 filter dimensions to generate the most relevant comparison group possible.

Step 3: Generate Your Report

Your benchmark report is generated instantly and includes:

- A white-labeled PDF with your branding

- Visual comparisons, rankings, and insights

- Ready for renewals, strategic reviews, or new business development

Why Users Love It

- **Fast:** Full report in ~3 minutes

- **Trusted:** Powered by 67K+ validated plans

- **Branded:** Clean, white-labeled output

- **Versatile:** Works across all industries

Backed by Real Data

No surveys, no guessing. Bnchmrk uses structured plan data and a proprietary compliance engine (benIQ) to ensure every report is accurate and defensible.
